BRAKES

CV Brake Pad and Disc Catalogue

- Premium brake pads
- Carbon upgrade
- Comprehensive range
- ECE R90 approved
- Complete range of wear lead kits
- 40 year history
- British made quality products

What makes EBC/EFI CV pads the best aftermarket choice ever?

EBC/EFI CV pads are British made from premium CV materials that are designed for maximum mileage and minimum disc abrasion. In this relatively new market place where almost all newly registered trucks and trailers now use DISC SYSTEMS the high quality necessary to provide safe braking without pad de-bonds short life or disc damage is the key motivation to EBC/EFI materials and processing. Here are the three compelling reasons to use EBC/EFI.

1. Interlayer technology

EBC/EFI have developed a SHOCK RESISTANT high strength interlayer that not only resists corrosion but reduces transmissions of shock and prevents pad de-bonds.

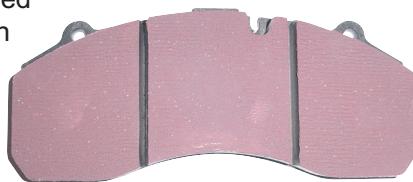

2. Pre-moulded expansion grooves

EBC/EFI mould the expansion grooves into the pad material whilst hot moulding. This reduces edge stresses at the pad to plate interface and prevents edge lifting whilst also giving the advantage of reducing surface cracks.

3. Brake-In™ Coating

All EBC/EFI CV pads now carry the revolutionary Brake-In™ coating which is a heat applied plastic abrasive layer that guarantees an instant high efficiency brake from first installation and helps condition the disc surface during the first few hundred miles of pad use. This coating process enables vehicles to pass vehicle inspection immediately after new pads have been fitted and is a major advantage to fleet users working to a time schedule or carrying perishable goods.

EBC/EFI's new CV brake disc range is designed to provide an OEM quality product at aftermarket pricing with an extremely high quality, availability rate and fast delivery.

Professional fleet operators will appreciate the benefits of this high quality product which is geared to extend fleet service miles between disc changes. These discs have been extensively dyno tested with EBC/EFI's own CV disc pads and are compatible with any OEM or quality aftermarket friction.

The labour and down time costs of replacing discs on heavier trucks is a major consideration when selecting appropriate disc suppliers. EBC/EFI consider themselves to be at the forefront of the premium CV Pad market in Europe and firmly intend to use this same philosophy of quality, service and availability to take the lead in the brake disc market.

Filiale du groupe Freeman Automotive, EFI est spécialisée dans la fabrication de plaquettes de freins. C'est sa grande connaissance dans le domaine de la friction qui permet à EFI de vous apporter aujourd'hui la plus importante gamme du marché de la rechange. Composée de plus de 250 références de plaquettes de freins elle est spécialement élaborée pour les véhicules industriels. Fabriqués en Angleterre dans des usines certifiées ISO 9001, ces produits répondent à la norme R90. Dans le seul but d'améliorer votre sécurité EFI a su mettre au point de nouveaux procédés de fabrication exclusifs.

Baptisée INTERLAYER la première innovation consiste à intercaler une sous-couche entre le support et la friction ce qui permet:

- de supprimer le risque de décollage en limitant la corrosion du support.
- offre une plus grande résistance à l'effort de cisaillement lors du freinage.
- supprime les vibrations.

La seconde permet d'améliorer l'homogénéité de la friction des plaquettes de grandes dimensions en supprimant l'opération d'usinage des rainures de dépoussiérage à l'aide d'une scie. Celles ci sont désormais directement obtenues par moulage à chaud. Les fibres n'étant plus sectionnées les contraintes sont mieux réparties et le risque de décollage des extrémités éliminé.

Ce procédé permet également de limiter l'apparition de fissures sur la surface de friction

La dernière nouveauté nommée BRAKE-IN consiste à l'application sur la surface de friction d'une couche plastifiée contenant des abrasifs. Ce procédé permet de limiter le temps de rodage en gommant les petites imperfections de la surface du disque.

Grâce à BRAKE-IN l'efficacité est immédiate, la sécurité de l'utilisateur est assurée et le risque de refus au control obligatoire éliminé. Freeman Automotive possède et distribue également les plaquettes de freins EBC Brakes. C'est EBC Brakes qui assure la distribution de EFI en Europe.

Industrial Applications

Friction Material Selection

KS

Premium off-highway material. Medium friction level ($\mu=0.32$) with excellent wear properties in most off-highway environments.

KT

Original equipment quality off-highway material. Medium friction ($\mu=0.32$) with exceptional wear properties. Used on popular OE off-highway vehicles.

KX

Medium - high friction heavy duty material ($\mu=0.38$) which is approved on many tram and light rail applications. Excellent pad and disc wear characteristics.

LJ

Premium off-highway material. Medium friction level ($\mu=0.32$) with excellent wear properties. Particularly suited to hot, dry and dusty environments.

LU

Premium off-highway material. Medium friction level ($\mu=0.32$) with excellent wear properties. Particularly suited to deep mud and slurry environments.

LW

A high friction material ($\mu=0.48$) with excellent static friction properties - recommended for industrial hand brake applications.

NH

Medium - high friction heavy duty material ($\mu=0.40$) with excellent static friction properties - recommended for heavy duty industrial hand brake applications.

Sintered

High friction heavy duty material ($\mu=0.55$). Material of choice in high energy applications. The advantages of sintered linings include superior performance, improved fade resistance, extended life and in many instances, allow for the utilization of compact, more efficient braking systems.
